

THE LOBBY.

Mini Admin Runbook for the founding-driver pilot

A mobile-first operations guide for adding drivers, verifying documents, handling complaints, applying migrations, and checking pilot health every day.

Version: 18 Jul 2026

Scope: 60 to 80 founding drivers, active rider pilot traffic, Kohima taxi stands.

Quick Verdict

Use the admin dashboard as the pilot command center. A driver should appear in rider search only after the profile is complete, documents are reviewed, and the account is active.

Admin Dashboard Map

Pilot	Daily pilot health, broken profiles, emergency mobile controls, exports, subscription reminders, and Sync & Refresh.
Verify	Review driving license requests. Approve clean drivers or reject with a reason.
Drivers	View, edit, mark online/offline, mark subscriptions paid/unpaid, suspend, unsuspend, delete.
Riders	View rider accounts, edit contact details, suspend problem accounts, export CSV.
Support	Review complaints, update status, add internal note, export complaints.
Analytics	Searches, driver profile views, call clicks, WhatsApp clicks, reports, completed ride confirmations.
Activity	Admin actions and audit trail.
Settings	Pilot settings and admin workspace controls.

Driver Readiness Rule

A driver is pilot-ready only when every item below is complete:

- ☐ Phone number added
- ☐ Vehicle type selected: hatchback, sedan, SUV, or two wheeler
- ☐ Vehicle number plate added
- ☐ Taxi stand or daily stands selected
- ☐ Vehicle photo uploaded
- ☐ Driving license uploaded
- ☐ Admin verification approved
- ☐ Account status active and not suspended

If any item is missing, keep the driver offline until fixed. This prevents bad first impressions for riders.

How To Add And Verify Drivers

- Ask the driver to sign up, choose Driver, and complete onboarding.
- Driver must add phone number, vehicle name, vehicle type, number plate, taxi stands, current stand, vehicle photo, and driving license.
- Open Admin Dashboard, then tap Sync & Refresh so Clerk and Supabase records are current.
- Open Pilot and check whether the driver appears under Broken Driver Profiles. Fix missing fields from the driver profile drawer if needed.
- Open Verify. Tap the license image or document link and inspect the name, photo quality, and expiry where visible.
- Approve only if the driver is known, document is readable, and profile data matches. Reject with a clear reason when the document is unclear, wrong, expired, mismatched, or suspected duplicate.

- Open Drivers, select the driver, confirm number plate and stand details, then Mark Online only after the readiness warning disappears.
- Use Export Drivers at the end of the day to keep a pilot backup list.

How To Apply Migrations

Apply migrations from Supabase Dashboard -> SQL Editor -> New query. Run files in order and confirm success before deploying new code that depends on them.

1	Run supabase/migrations/202607180001_add_rider_contact_verification_fields.sql. This adds phone and contact verification fields to public.users.
2	Run supabase/migrations/202607180002_add_search_analytics_fields.sql. This adds destination, requested stand, and vehicle type filter fields to analytics.
After run	Open Admin -> Pilot -> Sync & Refresh. Then test one rider search and one driver profile save.
Do not	Do not remove migration files from the repo during pilot. They are your record of what production needs.

If Supabase says a column already exists, that is usually fine because the migrations use IF NOT EXISTS. If a table is missing, stop and check the database setup before launching.

How To Handle Complaints

- Open Admin -> Support. Prioritize driver reports, safety issues, payment disputes, and repeated complaints against the same driver.
- Open the ticket and read the rider or driver message fully before taking action.
- Set status to pending, in_review, waiting_for_user, or resolved.
- Add an internal note when prompted. Keep notes factual: who was contacted, what was checked, and what action was taken.
- For serious driver complaints, open the driver profile from Drivers, Mark Offline first, then Suspend User if riders should not see that driver.
- If more information is needed, ask the complainant to send details through WhatsApp support.
- Export Complaints weekly during pilot so the company has a backup record.

How To Suspend Or Hide A Driver

Temporary issue	Drivers -> select driver -> Mark Offline. Use this for unavailable drivers, incomplete data, or a driver who should not take rides today.
Serious issue	Drivers -> select driver -> Suspend User. Suspension hides drivers from search and blocks operational actions.
After suspension	Add a short reason, create or update the related complaint, and message the driver through WhatsApp if needed.
Recovery	Unsuspend only after the issue is fixed, documents are clean, and the readiness warning is gone.
Deletion	Use Delete User only for duplicates, test accounts, or confirmed removal. Export data first when the account has pilot history.

Recover If Uploads Fail

- Ask the driver to retry with a smaller, clear image. JPG, PNG, WebP, HEIC, and HEIF are supported. Keep the file under 8 MB.
- Ask the driver to sign out and sign in again if the app says Please sign in again before uploading.
- If the app says driver profile not found, complete driver onboarding first, then retry upload.
- If multiple drivers fail upload, check Supabase env vars: NEXT_PUBLIC_SUPABASE_URL, NEXT_PUBLIC_SUPABASE_ANON_KEY, and SUPABASE_SERVICE_ROLE_KEY.
- Check that Supabase storage and public URL access are working for driver images.
- Check that users table columns exist: car_pic, license_url, profile_pic, verification_status.
- After a license upload succeeds, open Admin -> Verify and confirm a verification request appears. If not, tap Sync & Refresh and recheck.

Recover If OTP Or Contact Verification Fails

- Ask the rider to check the code, retry once, then request a new OTP.
- Confirm the rider entered the correct phone number or email address.
- Ask them to switch network if OTP delivery is delayed on mobile data.
- Tap Admin -> Sync & Refresh to sync Clerk contact data into Supabase.
- If many OTPs fail at once, check Clerk keys and webhook settings: NEXT_PUBLIC_CLERK_PUBLISHABLE_KEY, CLERK_SECRET_KEY, and CLERK_WEBHOOK_SECRET.
- If a verified user still looks incomplete, open their admin profile and check phone, email, phone_verified_at, email_verified_at, and contact_verified_at fields.

Daily Pilot Checklist

- [] Open Admin -> Pilot before drivers start work.
- [] Confirm Drivers Ready count matches the active driver plan for each stand.
- [] Open Pending Docs and approve or reject every waiting license.
- [] Open Broken Profiles and fix drivers without phone, plate, stand, vehicle photo, license, or vehicle type.
- [] Check No Phone and No Plate/Stand. Do not let these drivers go online.
- [] Check Open Complaints. No complaint should sit untouched for the day.
- [] Check unpaid drivers. Send Payment Reminder when needed.
- [] Export drivers and riders after major onboarding batches.
- [] Run one rider test: stand -> destination -> Find Driver -> call or WhatsApp.
- [] Run one driver test: dashboard opens, notification can be closed, upload controls visible.
- [] Keep WhatsApp support active while the pilot is live.

WhatsApp Backup Playbook

- Use WhatsApp support as the fallback when search returns no drivers, OTP is delayed, or a rider reports a safety issue.
- Use Payment Reminder from the Pilot controls for unpaid drivers. The app also creates dashboard reminders where possible.
- When a rider contacts a driver by call or WhatsApp, the app tracks the lead and can show the driver in Recently Contacted and Favourites.
- If a ride cannot be proven automatically, rely on lead reports, optional ride completed confirmations, monthly driver surveys, rider follow-up prompts, and call-click tracking.

Pilot Red Flags

Stop and fix before expanding the pilot if any of these happen repeatedly:

- Verified drivers are not appearing in search.
- Unverified or incomplete drivers appear to riders.
- Vehicle photo or license uploads fail for several drivers.
- Admin dashboard cannot Sync & Refresh.
- Complaints cannot be updated.
- Rider search succeeds but call or WhatsApp buttons do not work.
- Drivers from the wrong stand dominate search results.

End Of Runbook

Keep this PDF with the pilot admin phone. The daily routine is simple: verify documents, fix broken profiles, keep drivers online only when ready, handle complaints fast, and keep WhatsApp support open.
